Who We Are

Rollex Medical is a family based medical refrigeration and monitoring company operating throughout New Zealand and Australia, with offices and warehouses in Auckland, Sydney and Melbourne.

We now build our patented MATOS® Medical Fridges in Europe which are shipped worldwide. Over the last six years we have developed and patented web based technology to keep meticulous and robust records in medical fridges. Our market leading MATOS® Cloud fridges also have a built in automatic rescue function should the fridge controller fail.

Our main focus and ethos is to create and maintain a total ongoing support package for our customers and ensure that we attend to requests in a timely and helpful way. Our friendly staff are always only a phone call away.

What We Do

Rollex Medical are the exclusive Australasian distributors for MATOS®, LEC, and Angelantoni medical refrigerators, freezers, incubators and thermostatic chambers. Rollex are market leaders and the only medical refrigeration company that has been

endorsed by the Pharmacy Guild of Australia for the last 12 consecutive years.

Combine this with our unique web based monitoring and data-logging products, alarm systems and second to none service and technical support for a total solution for your temperature sensitive storage needs.

We have traditionally sold to and serviced customers in the area of medical refrigeration. We have a large infrastructure throughout Australia and New Zealand to provide Australasian wide service.

Why Choose Us?

Rollex Medical are New Zealand’s biggest and most trusted supplier of Medical Refrigeration products. With over 15 years experience in the industry, we will help you procure the best cold-chain compliant medical fridge for your needs. We will look after you for the life of your fridge. With Rollex Medical, purchasing a fridge is the beginning of a long-lasting relationship.

We will help you gain and maintain Cold Chain Compliance. We provide an annual service as part of our preventative maintenance programme, and even teach you how to check up on this should you have concerns between services, with one of our affordable data-logging systems. We also provide a free 24 hour support line for any technical issues or

SECTION 1 MATOS®

What is Matos®?

Matos® is a new range of purpose built Medical, Laboratory & Vaccination Refrigerators, Freezers and Thermostatic Chambers utilising internationally patented technology. The cabinet and componentry have been specially designed for use in the Medical field.

Why choose Matos®?

The Matos® range of fridges and freezers are built to the highest specifications and feature fast cool-down, sophisticated PID microprocessor controller with clear LCD display, an auto-diagnostic function and an unique fan control for better temperature maintenance. We also offer models with Hot Gas Defrost and Stainless Steel interiors.

What is Matos® Eco and Matos® Cloud?

The Matos® Eco range is manufactured in Europe to meet the highest standards, are energy efficient, have built-in fan management, locks fitted as standard, automatic defrost and come with solid or glass door options.

The Matos® Cloud is our premium range with the addition of our Data Acquisition & Transfer Module and Fridge Rescue System offering:

- **Built-In Monitoring**
Continuous temperature monitoring with email and optional SMS alerts ensures a robust complete monitoring record of your product even with loss of power.
- **Thermostat Override**
The patented control system ensures that in the event of a component failure, our Fridge Rescue System steps in and will keep the fridge within the optimum temperature range.
- **Battery Backup**
Our Matos® Cloud range include a smart, compact UPS built into the fridge so the temperature monitoring will continue during a power failure, ensuring an uninterrupted temperature log. (Backup time up to 36 hours). Automatic battery maintenance and smart-charging cycle ensures maximum battery life.

The Matos® PLUS Eco series are a new range of purpose built Medical and Vaccination Refrigerators, Freezers and Thermostatic Chambers. The cabinet and componentry have been specially designed for use in the Medical field.

Key Features include:

- Fast cool down
- Sophisticated microprocessor controller with clear LCD display
- Auto-diagnostic function
- Automatic defrost
- Unique fan control for better temperature maintenance
- Access Port as standard
- Door lock as standard
- Internal LED light
- Glass door option available on most models
- Temperature and door open alarms
- Other options include Hot Gas Defrost and stainless steel interiors plus...

3 Year Extended Warranty

When serviced by an approved service technician, the warranty is extended to 3 years.

Aluminium or Stainless Interior
Modern Refrigeration Technology

New Zealand: Patent 596323 | Australia: Patent 2012336431 | Europe: Patent Pending 12846969.9

The Matos® PLUS Cloud series includes all of the features of the Eco units, but with our unique, patented web monitoring and Fridge Rescue System.

Additional Features include:

- In the event of a fridge component failure, the system will send an alert, bypass the fridge's own controller and automatically maintain temperature until an engineer can attend and rectify the problem. This feature is unique to us, patented and has already saved thousands of dollars worth of product which would otherwise have been destroyed throughout New Zealand and Australia
- Unique website login for each client
- Temperature and door status constantly monitored
- Alerts sent via the website to designated users in the event of an alarm
- Alarms include temperature too high or low, door open, power loss, data communication lost
- Optional monitoring is available for simulated sample temperature and external ambient temperature
- The monitoring unit has its own UPS backup and will store data for up to 36 hours in the event of a power loss
- If internet connectivity is lost, the unit will store all the data and automatically upload when connectivity is re-established
- All data is stored on the secure website for access at any time for compliance purposes
- Users can set up automated reports by email
- Unlimited free email alerts are included in the service
- SMS alerts are available as an optional extra if required.

Matos® Monitoring is a web-based automatic temperature monitoring system, enabling direct access to your fridge temperatures and records, anywhere at any time.

Dedicated Server

Matos® Monitoring features a dedicated, off-site secure server ensuring fast access speeds when information is critical.

Email and SMS Alerting

Temperature excursions and status alarms are sent via email message and optional SMS message within seconds.

Ease of Access

Access fridge temperatures and statuses from any web-capable device such as a computer, smartphone or tablet.

Clear Concise Information

See temperature history and fridge status at a glance with easy to read colour coded indicators.

Full Alert History

Complete alert history makes audit trails a breeze. See who has responded, what action was taken and when, with the click of a button.

Automatic and Custom Reports

Get reports delivered direct to your email inbox or create custom PDF reports for any period.

Wireless Capability

Internet connection via wired or secure wireless network.

Robust Database

Double backup and RAID system ensures data is kept safe and secure for 10 years plus.

Battery Backup

With smart compact UPS built into the fridge the temperature monitoring will continue during a power failure, ensuring an uninterrupted temperature log. (Backup time up to 36 hours).

Automatic battery maintenance and smart-charging cycle ensures maximum battery life.

Outgoing Communication Only

As there are no incoming connections to the monitoring device the network security of your business is never compromised.

Self Reporting/Analysing

Self monitored device ensures that any hardware problems are reported to the user ensuring a quick response.

Freezers with forced air convection are “no frost” freezers. The basic principle of such system is to manage humidity inside the unit and prevent frost formation on the walls. Advantages: Uniform distribution of cool air through the chamber; Faster achieving of set temperature even with a large filling of the chamber.

matos® Thermostatic Chambers

MATOS® Thermostatic Chambers are equipped with both heating and cooling systems to hold a stable temperature range regardless of ambient conditions.

The Matos® ARIA Cloud and Eco series are a new range of cost-effective European-built Medical and Vaccination Refrigerators featuring the latest technology in controllers and compressors for accurate temperature stability.

Key Features include:

- Fast cool down
- Featuring the Carel soft touch controller - with min/max readings at the touch of a button
- Automatic defrost
- Unique fan control for better temperature maintenance
- Auxiliary Alarm Contacts as standard
- Door lock as standard
- Internal LED light
- Glass door option available on all models
- Temperature and door open alarms
- Available in Cloud or Eco versions
- plus...

Extended Warranty

Standard 12 month warranty however an extended warranty option is available subject to Terms and Conditions

Available as an Eco or Cloud version

*Cloud unit has the MATOS Monitoring solution in-built into the Refrigerator.

MATOS® PLUS RFID PHARMACEUTICAL REFRIGERATORS

MATOS® PLUS RFID REFRIGERATOR RANGE

Rollex Medical proudly introduces our new exclusive MATOS® Real Time Inventory and Temperature Monitoring RFID Cloud Refrigerator Range.

The MATOS® Cloud RFID system is an Inventory management solution, installed within the tested & proven MATOS® Cloud Pharmaceutical Refrigerators. It utilises the MATOS® Monitoring Cloud Platform to provide live inventory status information; detailing exactly what products are located in a fridge cabinet, product expiry information and re-order levels at all times. Each Refrigerator is linked directly to the comprehensive MATOS® Monitoring Real Time Temperature monitoring platform, ensuring that all critical temperature and product status information is always available.

MATOS® RFID Refrigerators are available in a range of models from an Under Bench 150L to a Freestanding 625L Refrigerator. Available for use in any Hospital, Pharmacy, Clinical Laboratory or local Doctor Surgery our MATOS Refrigeration range is manufactured in Europe with only the latest technology in Refrigeration being utilised to ensure you can have confidence in the asset you are purchasing.

The MATOS RFID Pharmaceutical Refrigeration range is your fully automated, in-built solution for all your Inventory and Temperature Monitoring requirements.

Benefits of the RFID Pharmaceutical Refrigerator:

- Monitor stock levels 24/7
- Monitor stock rotation- reducing wastage
- Be provided with data to assist with forecasting
- Daily, Weekly, Monthly Automatic Inventory / Temperature Reporting
- Reduces Human Interaction with the removal of manual stocktakes and downloading temperature dataloggers
- Product recalls are easily managed
- Ensure stock is legitimate and untampered from the point of manufacture
- Robust audit history with Data Management / Protection (conforms to FDA CFR Chapter 21, pt. 11 regulations)
- Receive Alerts when stock is running low and about to expire
- Live Dashboard Interface available on any web capable device so is accessible anywhere in the world
- Along with full 24/7 Temperature monitoring, SMS/Email Alerts and Cold Chain Reporting to ensure your stock is being kept at the required temperature range

With our MATOS® RFID Refrigerators there is **NO SOFTWARE** as the entire platform is web based and backed up using the Azure Cloud platform.

SECTION 2

LEC MEDICAL

We have developed our range of Pharmacy and Laboratory refrigerators and freezers with reliability and ease of use in mind.

Our Pharmacy range conforms to the guidance set out by the Pharmacy Guild of Australia and maintains an internal temperature of between +2°C and +8°C. Our Laboratory fridges operate at a temperature of +2°C to +10°C and our freezers operate at -18°C and below.

We have also added a number of improvements to most popular models to ensure we are offering you the best possible secure and reliable refrigerated storage.

New Generation Refrigeration

Fridge & Freezer product line features:

- Energy efficient refrigerant
- Fan management system
- Advanced controller
- Anti-microbial handle
- Ready to use
- Forced air cooling
- Storage flexibility
- Fitted rollers
- Lock fitted as standard

We offer a wide range of freezers to suit your needs, from small counter-top units ideal for when space is limited, to freestanding units for when extra storage capacity is required.

SECTION 3

ARCTIKO

ARCTIKO
true cooling specialists

The Arctiko Range offers a wide selection of standard and special equipment for Research Centres, Hospitals, Laboratories, Academia industry.

The ARCTIKO Range

Medical Freezers

Based in Esbjerg in Denmark, Arctiko develops and assembles medical and lab freezers and pharmaceutical refrigerators for the global and health care medical industry. This industry is vital for global health, treatment of patients and research and development of new medicine and we are proud to support it.

We offer a wide selection of ultra low temperature freezers and refrigerators. With our biomedical freezers, ultra low temperature freezers and cryogenic freezers, your samples are stored safely under a stable temperature. Additionally to our line of freezers, we also provide pharmaceutical and blood bank refrigerators.

True Dual Technology

Our TRUE DUAL™ technology is an extra layer of security because we understand that storing samples is important and that each sample is priceless. To keep your

samples safe and to protect the hard work put into the samples, we designed the TRUE DUAL™ technology. This technology consists of two independent cooling cycles based on the single compressor system. In the unlikely event of an error or breakdown of one of the cycles, the other system will serve as backup.

Ultra Low Freezers with Single Compressors

Storing medical samples at ultra low temperatures is thus of the utmost importance. To support this sensitive process, we give you Arctiko's single compressor system which is one of the best solutions for ultra low temperature storing. Our single compressor cooling system uses one compressor and one cooling cycle to ensure a one of a kind range of ultra low temperature freezers with reliable and remarkable temperature performance. The system requires less maintenance, has less heat dissipation, lower consumption of energy as well as noise reduction.

OPTIMAL CHOICE FOR SAFE AND RELIABLE STORAGE OF BLOOD, DUE TO THE DUAL COOLING SYSTEM THAT WILL PROVIDE DOUBLE SECURITY. These models are MDD certified, TGA Approved and designed with stabile and reliable temperature uniformity from top to bottom.

SECTION 4
MONITORING
SOLUTIONS

MATOS® MONITORING SOLUTIONS

MATOS® Monitoring is a web based, automatic temperature monitoring system, enabling direct access to your fridge / freezer temperatures and records anywhere, at any time.

MATOS® Monitoring Technology can also be utilised in many other monitoring applications

Temperature | Gas or particle levels
Oxygen / CO2 levels | Pressure | Humidity
Ultra Low Temperature | Glycol

Take a look at the Monitoring demonstration site - www.matosmonitoring.com using the following:
Username: matosdemo1 / Password: matosdemo1

New Zealand: Patent 596323 | Australia: Patent 2012336431 | Europe: Patent 12846969.9

MATOS® WIRELESS MONITORING KIT (MWM)

Rollex Medical proudly introduces our new exclusive Wireless Monitoring Kit (MWM) which can be retrofitted to any Refrigerator, Freezer, Cool-Room or Airspace in seconds.

This addition to the MATOS® Monitoring product range provides you with an easy to install solution with no technical expertise required while still providing you with the proven temperature monitoring system of choice using our MATOS® technology.

How does the System Work?

Place the sensor tile anywhere inside your Refrigerator where you wish to monitor the temperature. The Sensor transmits the data to the Base Station wirelessly. The Base Station is connected to the Internet using an Ethernet cable and will pick up all transmitted data from the tile and upload it to our MATOS® Monitoring Azure Server. You then have access to your full temperature records online, automatic reporting and SMS/ Email alerts using our MATOS® Monitoring technology.

Providing the premium MATOS® Monitoring technology in a compact, easy to install solution:

- Fully automatic online monitoring
- Requires an internet connection
- Sensors can be mounted straight onto any surface with easy adhesive strip
- Infinitely expandable
- Instant user alerts upon temperature breach
- Replaceable battery
- 30 days internal memory
- Cloud storage integrity guaranteed for at least ten years
- NZ, Australian & FCC Compliance
- Enjoy the range of MATOS Monitoring Features without an invasive installation
- Powerful yet simple reporting system
- Compatible with any existing MATOS Monitoring System products
- Up to **40 Wireless Sensors** can be connected to a SINGLE Ethernet Base Station Receiver Unit!*

**Effective radio communication distance is 210m line of sight.
Standard MATOS® Monitoring terms and conditions apply. Extra charges may be applicable or excess sms alerts.*

Retrofit Monitoring

M-310

MATOS® Monitoring can now be retrofitted to any fridge, freezer, cool-room or airspace. This can be achieved with the use of our new MATOS® M-310 stand-alone monitoring unit. Developed and built in New Zealand, the M-310 is a robust, secure monitoring unit that is wifi and cellular compatible for all your monitoring environments.

MATOS® M-310 is a standalone monitoring unit that is quick and easy to install and provides most of the premium MATOS® Monitoring features in a compact, robust enclosure:

- Fully automatic, online monitoring – www.matosmonitoring.com
- Requires internet connection (wifi & cellular options available)
- Wall mount or benchtop monitoring unit
- Supports up to 6 digital temperature sensors/probes
- Supports 2 digital inputs (I/O) e.g. monitor power or door status
- Variable probe lengths and configurations available
- 36 hour Battery Backup with instant power switching
- 30 days internal log memory
- Cloud storage data integrity guaranteed for at least 10 years
- New Zealand and Australian compliant.

Standard MATOS® Monitoring terms and conditions apply. Extra charges may be applicable for excess sms alerts.

We also offer tailor-made options for retrofitting our complete Fridge Rescue System and Monitoring M-R01 and M-R02 units into compatible fridges and freezers.

Remote Monitoring

Control *by* WEB

ControlByWeb products are high-end components for remote monitoring and control applications. Our products are used to monitor and control many different types of equipment and systems in real-time from any computer using a web browser. Our products can be used as stand-alone devices in simple applications, offering a complete solution requiring no additional equipment and they can also be used as building-blocks in large systems.

How They Work

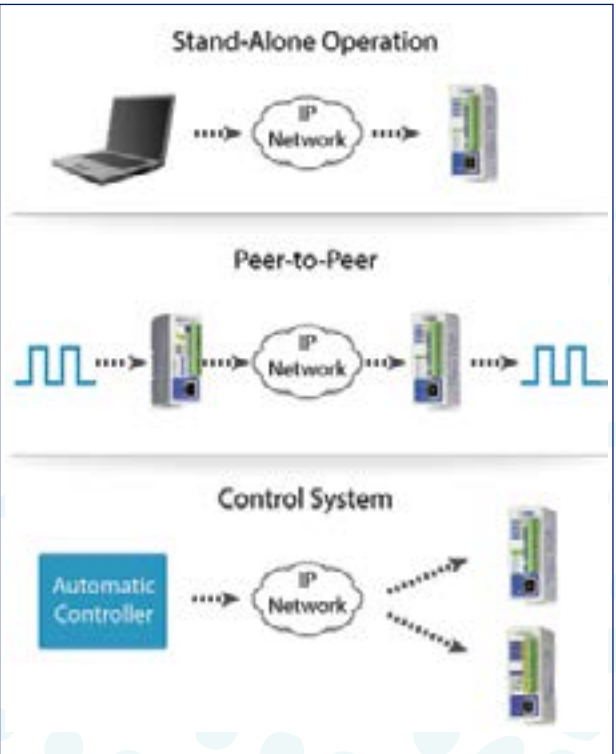

Each ControlByWeb product has a small combination of I/O (inputs & outputs) and a built-in web server. Sensors, switches, voltages, etc., can be connected to the inputs for monitoring various parameters, conditions, or events such as temperatures, voltages, or alarms. Because our products have a built-in web server, users can view input parameters and control relay outputs using a simple web page from just about any web browser. In addition, our products support multiple protocols so they can communicate directly with computers, PLCs, and automation controllers in more advanced control systems.

Example Applications

ControlByWeb products can be used to monitor temperature, humidity, power, tank levels, pressure, the status of doors, windows, production machines, and much more.

Why ControlByWeb

ControlByWeb products are designed to be extremely robust and reliable. Although they are affordably priced, no shortcuts were taken in their design, and no compromises were made in the parts used. Some would say that our products are “over engineered” because there are many internal parts that could be replaced with less expensive versions or even removed to save money, but we believe it’s more important to build them right than to build them

cheap. Our products are carefully made in the USA and each product is inspected many times at different levels of production and tested before it is shipped. Our firmware is tested both manually and automatically for long time periods to verify its integrity before it is released. These are just a

LogTag® Data Logging System

LogTag® products are designed to meet the growing demand for cost effective electronic environmental recording solutions.

Combining state of the art technology, innovative design and high volume manufacturing techniques, the LogTag® system provides the most cost effective, high performance environmental data logging system available for today's market.

LogTag® products are used in a huge number of different applications including widespread use in food and pharmaceutical temperature and/or humidity monitoring for both storage and shipping. Our products are also used for education and research with products holding approvals with many world recognised organisations such as the World Health Organisation.

Applications

The LogTag's® versatility and low-cost make it the preferred choice for many applications in these sectors.

- Cold chain management
- Medical and pharmaceutical environments
- Agricultural production
- Transport and shipping
- Monitoring of catering equipment in cafes, fast-food outlets and restaurants
- HVAC Systems
- Medical and agricultural research
- Storage and warehousing
- Monitoring of machinery and equipment

LogTag® is a battery powered, low cost, robust data logging solution.

The Logtag® Data Logger is a “thermometer with a memory” that has been designed to record temperatures from -40°C to +65°C. It features a data logging memory which can store over 7000 temperature readings and a separate, rolling, 30 day statistical max/min reading and duration memory.

The display is designed to show ‘at a glance’ if temperature excursions have occurred for both the current reading and up to 30 days in the past. Details of any excursions can be checked directly by inspecting the statistics history on the recorder’s display or in more detail by downloading the logged data.

Logged temperature data can be downloaded and analysed to display data in chart, table or statistical formats and allows electronic archiving, export or transmission of the data in support of sophisticated data management systems.

Low cost

LogTag® data loggers are low-cost loggers that break the price barrier to continuous, extensive logging. Even large numbers of LogTags® are generally cheaper than traditional multi-channel loggers and can be easily installed and deployed.

Visual alarm indicator

The LogTag® is the perfect choice for applications in which visual alarm notifications are crucial. A flashing LED indicates that the pre-configured temperature alarm range has been violated. It's then advisable to perform a comprehensive analysis of the readings on a PC. If the LED does not flash no further analysis is necessary. This feature is a real time-saver when large number of LogTags® are being used.

Small and robust

The LogTag® is incredibly small considering its features and its robust polycarbonate housing will protect it from external shocks.

Other features:

- Visual alarm (LED) indicates temperature limit violations
- Start the logger with your PC or with the logger's 'Start' button
- Set a start delay to avoid recording unnecessary readings
- Record an inspection mark in the log by pushing the 'Start' button
- Optional clearing of alert indication by push button
- 'Low Battery' warning indication in software
- The hole in the LogTag's® housing makes it easy to hang or attach.

Technical details

Temperature range:	-40°C ~ +85°C
Resolution:	< 0.1°C for -40°C ~ +40°C < 0.2°C for +40°C ~ +80°C
Accuracy:	Better than ±0.5°C for -10°C ~ +40°C. Better than ±0.7°C for -10°C ~ -30°C & +40°C ~ +60°C Better than ±0.8°C for -30°C ~ -40°C & +60°C ~ +80°C
Log size:	8,000 readings
Sensor reaction time:	Typically less than 5 minutes (T90) in moving air
Sampling rate:	Adjustable, 1 minute to several hours
Power source:	Onboard 3V Lithium battery
Battery life:	Average 2 - 3 years of normal use
Size:	86mm (L) x 54.5mm (W) x 8.6mm (H)
Weight:	35g
Case Material:	Polycarbonate

Rollog Temperature Monitor

Kits = Software + Reader + Case + Thermocron

The eTemperature software, reader, case and thermocron are supplied as a kit. The software can be freely copied onto multiple PCs and the reader moved between PCs. Additional loggers and readers may be purchased separately.

eTemperature Software

eTemperature allows you to quickly and easily:

- Setup the Thermocron's sample rate, start delay, high and low alarm limits, and rollover option
- Download the results from the Thermocron to the PC
- Display the results as a table
- Display the results as a graph. The graph supports panning and zooming to easily identify problems
- Save results for later recall
- Export results to Microsoft Excel, Microsoft Word, and email results.

USB Reader

The USB reader provides a fast and easy connection between the Thermocron and PC. It also has two connectors for the Thermocron.

Rollog temperature loggers (thermocrons) are a thermometer with memory. They continually monitor the temperature and then record the date, time and temperature in memory. These readings can be then downloaded to a computer to be viewed, saved and reloaded at a later date.

This allows you to know exactly what the temperature was at all times. You can determine if your goods are usable, if something is too hot or cold, or to prove that everything is acceptable. The date and time information allows you to know exactly when a problem occurs and can often answer the why and when questions.

The thermocrons are constructed of stainless steel and are almost indestructible. They are also water resistant so they can be washed, submersed and sterilised.

SECTION 5 MEDICAL CARE

Antimicrobial catheter lock system to provide patency and infection control.

Prophylaxis against catheter related bloodstream infections:

Central venous catheters (CVC) are used as short or long term vascular access devices in haemodialysis, oncology, ICU and total parenteral nutrition. High risks for CVC malfunction are catheter related infections (CRI). these infections may be triggered by microbial colonization of the catheter and the microorganisms can spread from here to the bloodstream. CRI may develop septic symptoms which require the immediate removal of the catheter.

Taurolock® catheter lock solutions do not contain antibiotics and were developed for prophylactic use. They reduce catheter related infections significantly (~ 90%).

The combination of citrate (4%) with (cyclo)-taurolidine and heparin/urokinase has excellent anticoagulative and anti-microbial properties also against resistant microorganisms like MRSA and VRE. Therefore Taurolock® is recommended in different guidelines such as the Hygiene Guidelines completing the German Dialysis standard, the guidelines from the German society of applied Hygiene in Dialysis and the evidence-based

Taurolock® is safe:

- The concentration of 4% citrate in Taurolock® is safe and efficient – according to the recommendation of the FDA (ref.: FDA Warning letter, April 2000).
- No hypocalcaemic effects are observed in contrast to highly concentrated citrate solutions (30% resp. 46,7%) e.g. arrhythmia, cardiac arrest*, emboli**, tingling fingers and metallic taste***.
- Taurolock® is biocompatible and non toxic.
- In contrast to highly concentrated citrate there is no protein precipitation if using Taurolock****.

SECTION 6 AFTER SALES & ACCESSORIES

Preventative Maintenance

What is Preventative Maintenance?

A refrigerator or freezer is one of the hardest working appliances in our workplace - it is working 24 hours a day, 365 days a year without taking a rest and little attention is usually given to it. Rollex Medical have a comprehensive Preventative Maintenance Programme which can significantly increase the life and efficiency of your refrigeration equipment. By implementing routine preventative maintenance, you can save up to 10 percent on refrigeration energy costs and all refrigeration equipment needs preventative maintenance to keep it in the best operating condition. Good service can also mean the difference between a few mechanical malfunctions or continuous problems.

Extended Warranty

Rollex Medical offer a 3 Year Extended Warranty if you sign up for our Preventative Maintenance Programme. The Preventative Maintenance Programme also entitles you to FREE telephone support for any adjustments to the refrigerator/freezer that may be required from time to time.

Your Extended Warranty is valid for three years covering all Parts and Labour providing that:

- 1. Preventative Maintenance is carried out annually during the warranty period
- 2. A Power Surge Protector or Uninterrupted Power Supply is fitted to protect the unit
- 3. A completed Warranty Document is filled out and returned to Rollex Medical (NZ) Ltd

If the conditions above are not carried out, then the standard warranty of 12 months from date of purchase applies.

Preventative Maintenance Programme

Our skilled technicians will complete a comprehensive 20 point checklist and also arrange for complete repairs if required.

An example of the service duties includes:

- Clean and check condenser
- Check interior and exterior fans
- Check piping for damage
- Check interior/exterior lighting
- Check surge protection
- Check drains are clear
- Clean compressor and surrounding area
- Check test accuracy (data log test)
- Clean under, behind and around unit
- Check clearance around fridge area
- Check door and seal for damage
- Check power cable is in good condition
- Check evaporator for icing
- Check interior airflow
- Check status and settings
- Check probe is in free air

Battery Backup UPS

The Rollex UPS Series has been specially adapted for use on medical and other refrigerators by providing a clean, safe and regulated power supply and power correction factor. This provides extended battery backup time if a power cut occurs, and therefore protecting your valuable product.

Multiple Configurations

Available in 1 or 2 string battery configuration allowing for a run time of up to 8 hours or more.*

High Efficiency

Minimal heat dissipation ensures maximum efficiency. Be sure to locate UPS in as cool environment as possible, as this will extend UPS life.

Self Monitoring

All UPS models feature a self monitoring and fault diagnosis function, alerting you if a problem is detected.

Power Factor Correction

Improves power factor on refrigerators, reducing the load of high-current compressor starts and extending the life of the components and saving power.

* Run time calculated based on first year use testing by an independent tester on a Vaccine Fridge. Battery degradation will occur over the battery life and therefore fridge run times will reduce over the years. Batteries can easily be changed in the future.

Fridge Model or Equivalent	Door Type	Single String 2k UPS 7Ah approx. runtime	Double String UPS 9Ah approx. runtime
Small Fridge (150L)	Glass	2hrs 46m	8hrs 15m
Large Fridge (250L)	Glass	2hrs 46m	8hrs 22m
Small Fridge (150L)	Solid	2hrs 47m	8hrs 45m
Large Fridge (250L)	Solid	2hrs 38m	10hrs 2m
Large Fridge (350L)	Solid	3hrs 25m	10hrs 1m

Fridge average runtimes calculated by independent tester in recommended ambient conditions for refrigerators.

Surge Protection

Built in surge protection helps protect your medical fridge from dangerous power spikes and surges such as blackouts and lightning strikes.

Advanced Microprocessor Controller

The advanced microprocessor controller and LCD display make the 2kVA UPS simple and easy to understand with available notifications for power loss and battery faults, requiring no user maintenance.

Rollex Outlet Surge Protectors

Power related problems are the number one cause of damage to equipment and lost data (damage not covered by product warranties). We recommend Belkin surge protectors which are built to the highest standards and are backed by a genuine lifetime product replacement warranty.

Standard Range

SurgeMaster Single Surge Protector
SurgeCube Double Surge Protector

Specifications: 2.40 kVA - 1181 J - 250 V AC Input - 250 V AC Output

- Surge Protected AC Outlets
- EMI/RFI Noise Filtration: 150kHz~100MHz: Electromagnetic interference/ radio frequency interference causes AC line contamination.
- Joule Rating: 1181J
- Protected and Earthed Indicators
- Belkin's Lifetime Warranty
